Technical Skills

- **Languages:** s: Python, SQL, JavaScript
- **Python for AI/ML:** : NumPy, Pandas, Matplotlib, FastAPI, PyTest
- **Web:** React.js, HTML5, CSS3, REST APIs
- **Databases:** MySQL
- **Tools & Process:** Git, GitHub, Postman, Jira, Agile/Scrum
- **Core Concepts:** Data Structures & Algorithms, Object-Oriented Programming, SDLC, STLC

Professional Experience

Apprentice | American Express January 2026 - Present

- Upgraded a backend service to the latest major framework version and migrated its distributed tracing from OpenTracing to OpenTelemetry, by updating dependencies and re-instrumenting the tracing layer
- Migrated a template database to the company's internal database platform with 100% continuity across dependent services, by moving the data and verifying each service after the switch.
- Automated 5 engineering workflows (PR creation/review and Jira ticket creation, review, and fix) by building an internal skill-suite that runs each workflow end to end.
- Delivered real-time vulnerability reports across 50+ tracked services by writing automated reporting scripts that pull and consolidate vulnerability data per service
- Raised test coverage of an event-driven backend module from 20% to 100% by writing 20,000+ lines of automated tests using the Reflection API.
- Achieved 100% validation of critical APIs by automating regression tests for microservices, with test suites that exercise each critical endpoint.

Frontend Developer | Indian Infotech January 2025 - November 2025

- Built 10+ reusable React.js components for scalable, responsive UIs by using HTML5, CSS3, and JavaScript.
- Shipped features across 10+ Agile sprint releases by integrating 8+ REST APIs in collaboration with cross-functional teams.
- Ensured reliable data flow across 8+ integrated REST APIs by testing each endpoint in Postman before connecting it to React components.

Artificial Intelligence Intern | Acmegrade April 2022 - June 2022

- Achieved 90% prediction accuracy by training a Python ML model with NumPy, Pandas, and Scikit-learn.
- Improved model input quality across 1,000+ records by performing data preprocessing and feature engineering.
- Verified the model's 90% accuracy by evaluating its predictions on test data using Scikit-learn.

Projects

Handwritten Digit Recognition

- Built a real-time handwritten digit recognition model trained on 60K+ MNIST images, by using Python and deep learning.
- Cut inference latency and enabled deployment across 2 automation use cases, by streamlining the image preprocessing pipeline

Co-Exist: Sustainable Living Platform

- Delivered a full-stack web platform with 3+ core modules, by implementing secure authentication and personalized user dashboards.
- Enabled data-informed decisions by launching an analytics dashboard tracking 5+ user activity metrics, built by capturing user activity data and visualizing it on the dashboard.

Education

United College of Engineering & Management, Allahabad 2020 - 2024
Bachelors of Technology in Computer Science and Engineering **CGPA: 7.99/10** | Certificate of Excellence in Department

Certification

- Python Full-Stack Developer — DUCAT
- Google IT Support Certificate — Coursera (Google)
- Core Java & Machine Learning — Summer Training Program

Leadership And Achievements

- Earned a Certificate of Excellence in the Computer Science department at United College of Engineering & Management (B.Tech, 2020 - 2024).
- Delivered 5+ technical presentations at college events and competitions; led 3+ technical projects from requirement analysis through deployment.
- Solved 100+ coding problems on Leetcode
